1, porcine seminal plasma protein, bovine acidic seminal fluid protein cand Xenopus laevis tolloid-like protein. Structural analysis and homology predict that ZVEGF3 polypeptides complex with a second polypeptide to form multimeric proteins. The human zvegf3 gene has been mapped to chromosome 4q28.3. ZVEGF3 is useful for stimulating the growth of CC fibroblasts or smooth muscles cells, for activating cell surface PDGF-calpha receptor and for inhibiting PDGF-alpha receptor mediated cellular processes. ZVEGF3 is useful for regulating (post-development) organ growth, regeneration and maintenance, as well as tissue maintenance and crepair processes. ZVEGF3 analysomator, is chemic limb disease, rheumatoid arthritis, diabetic retinopathy, ischemic limb disease, poripheral vascular disease, myocardial ischemia, vascular intimal hemmangioma formation. ZVEGF3 can also be used to modulate neurite growth can development of the nervous system, and for treating neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   07-DEC-1998;

                                                                                                                                                                                                                                                                                             (vascular endothelial growth factor homologue) are claimed. The growth factors comprise a growth factor domain and a CUB domain (generic sequence motifs are shown in AAY96859 and AAY96860). The growth factor domain is characterized by an arrangement of cysteine residues and beta strands that is characteristic of the "cysteine knot" structure of the platet-derived growth factor (PDGF) family. The CUB domain shows homology to CUB domains in neuropin homology to CUB domain shows
                                                                                                                                                                                                                                                                                                                                                                                                                       Polypeptides comprising an epitope-bearing portion human or murine ZVEGF3 (vascular endothelial growth factor homologue) are claimed. The growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC characterised by a POGF cystine knot structure, and a CUB domain CC (AAB8655) which has a beta barrel structure, and a CUB domain CC (AAB8655) which has a beta barrel structure, and a CUB domain CC muscle cells and pericytes, and has also been shown to stimulate bone growth. The invention also relates to fusion proteins comprising human comprising human zvegf4 or fragments thereof, particularly human zvegf4/human zvegf3 CC fusions; expression constructs and host cells comprising human zvegf4 conclete acids; the recombinant expression of human zvegf4, an antibody CC which binds to human zvegf4 or a fragment thereof; a method of activating a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a method of bone cells, comprising exposing bone cells to zvegf4-derived comprising exposing agenetic abnormality in the creatment of a patient. Zvegf4 proteins and derived fragments may be used to stimulate tissue development or repair, or cellular comprising exposing and may also be used to modulate or repair of liver damage, and may also be used to modulate or the treatment of periodontal disease and fractures. They may be used in the creatment of periodontal disease and fractures them cells and cells and condothelial precursor stem cells, which may be useful in the treatment of schemal, in wound healing, and in the modulation of the immune system.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the human growth factor homologue zvegf4 (AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member of the PDGF (platelet-derived growth factor)/VEGF (vascular endothelial growth factor) family. Zvegf4 has a growth factor domain (AAB48654)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 th factor homologs and the nucleic acids that encode them, useful for treating liver damage, ischemia, multiple sclerosis and
                                                                                                                                                                                            361
                                                                                                                                                                                                                                                    301

                                                                                                                   The present sequence is the complete human platelet derived growth factor (PDGF)-D, formally known as Vascular Endothelial Growth Factor (VEGF)-G. It is derived from human foetal lung lambdagt10 cDNA library. It belongs to the VEGF/PDGF family. It functions as an activator of proliferation, differentiation, growth and motility of cells, that express PDGF-D receptor. This sequence is useful for inhibiting the growth of tumours, that express PDGF-D. Expression of PDGF-D and its procepytic cleavage for generating an activated truncated form is useful for regulating receptor binding specificity of PDGF-D. PDGF-D antagonist is useful for inhibiting tissue remodelling during the invasion of tumour cells into normal cells. PDGF-D may be used to treat wounds, atherosclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotides encoding a novel growth factor of a platelet-derived growth factor, useful for diagnostic applications, e.g. concerning cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (LUDW-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Platelet Derived Growth Factor-D; PDGF-D; human; cytostatic; vulnerary; VEGF-G; Vascular Endothelial Growth Factor; antiatherosclerotic; tumour proliferative; activator; proliferation; differentiation; motility;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
The present invention relates to a vascular endothelial growth factor (VEGF) family member, VEGF-G. VEGF-G protein and nucleic acid molecules are used as modulating agents or as targets for developing modulating agents to regulate a variety of cellular processes e.g. cell proliferation, differentiation, migration and wound repair. VEGF-G modulators, i.e. VEGF-G protein, peptide, peptidomimetic or nucleic acid are used to treat a subject with aberrant VEGF-G protein or nucleic acid expression or activity e.g. deregulated cell growth, such as cancer, hyperptrophic bone disorders, disorders involving aberrant angiogenesis e.g. psoriasis, and chronic inflammatory diseases e.g. rheumatoid arthritis. VEGF-G gene expression is inhibited through the administration of antisense molecules or ribozymes and by targeting the regulatory region of VEGF-G to prevent transcription of the gene in target cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gearing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FCTRX proteins are useful for treating or preventing a disorder associated with aberrant expression, aberrant processing, or aberrant physiological interactions of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and thair associated nucleic acids are useful for both promoting and inhibiting growth of cells and tissues and in treatment of cancer, anaemia, leukopenia, baldness, for treating cardiovascular and fibrotic disorders, diabetic ulcers, obesity, infectious diseases, hyperproliferative and dysproliferative disorders, neurodegenerative disorders, osteoarthritis, inflammatory disorders, Graft versus host disease, coagulation disorders such as haemophilia, and neural disorders including Parkinson's disease, Alzhelmer's disease, multiple sclerosis, Huntington's disease amyotrophic lateral sclerosis, peripheral neuropathy, acute brain injury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence represents a protein related to bone morphogenetic protein-1 (BMP-1), vascular endothelial growth factor (VEGF-E) and platelet derived growth factor (PDGF). Polypeptides and polynucleotides related to BMP-1, VEGF-E and PDGF are referred to as FCTRX peptides and nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2001-316172/33.

standard;

protein;

370

The sequence represents a protein related to bone morphogenetic protein-1 (BMP-1), vascular endothelial growth factor (VBGF-E) and platelet derived growth factor (PDGF). Polypeptides and polynucleotides related to BMP-1, VBGF-E and PDGF are referred to as FCTRX peptides and nucleic acids. FCTRX proteins are useful for treating or preventing a disorder associated with aberrant expression, aberrant processing, or aberrant physiological interactions of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and their associated nucleic acids are useful for both promoting and inhibiting

Novel growth factor polypeptides termed as FCTRX polypeptides, useful for treating cancer, cardiovascular and fibrotic diseases, diabetic ulcers, wound healing and neuronal disorders.

                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to the use of zvegf4 polypeptide for promoting CC bone, ligament or cartilage growth in a mammal, and for promoting CC proliferation or differentiation of osteoblasts, osteoclasts, CC chondrocytes or bone marrow stem cells in culture. For promoting CC cartilage growth, chondrocytes are cultured ex vivo in presence of the CC zvegf4 polypeptide and then placed into mammal where cartilage is to be CC grown. Zvegf4 polypeptide is useful for promoting growth of bone, CC ligament or cartilage in a mammal at a site of bony defect such as CC fracture, bone graft, implant or periodontal pocket, in humans and non-CC animals. Zvegf4 is used for promoting growth of bone, ligament, or CC cartilage in conditions of bone defects following therapeutic treatments CC of bone cancers or other conditions characterized by increased bone loss or decreased bone formation, or elevation of peak bone mass in precompausal woman. It is also useful for healing bone following rediation CC promotion of bone healing in plastic surgery, increasing bone formation of the condition of bone healing in plastic surgery, increasing bone formation of cartilage and ligament and treatment of osteoporosis. The present of cartilage and ligament and treatment of osteoporosis.

The patent discloses materials and methods for reducing cell
CC proliferation or extracellular matrix production, treating fibrosis and
CC reducing stellate cell activation in a mammal. The method comprises
CC administering a composition containing a Zvegf3 antagonist in combination
CC with a delivery vehicle. The Zvegf3 is a protein that is structurally
CC related to platelet-derived growth factor (PDGF) and the vascular
CC endothelial growth factors (VEGF). The Zvegf3 protein is also designated
CC as "VEGF-R" and "PDGF-C". The Zvegf3 antagonist is useful to block the
CC mitogenic effects of zvegf3 and thereby to inhibit or prevent and treat
CC teloids, scleroderma, fibrotic disorders of liver such as chronic active
CC hepatitis, fulminant viral hepatitis, post necrotic cirrhosis and alpha-1
CC diabetic glomerulosclerosis, focal glomerulosclerosis, diabetic
CC diabetic glomerulosclerosis, focal glomerulosclerosis, diabetic
CC of the lung such as silicosis, and reriosclerosis, fibrotic disorders
CC fibrotic disorders of pancress, fibropoliferative
CC bronchiolitis obliterans-organising pneumonia and pulmonary hypertension,
CC fibrotic disorders of pancress, fibropoliferative disorders of the bone such as osteopetrosis and hyperoscosis. The present
CC disorders is human Zvegf4 protein which forms a heteromultimer with Zvegf3
CC received.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of zvegf3 antagonist for reducing fibroproliferative disorder kidney, liver and bone, reducing extracellular matrix production, treating fibrosis or reducing stellate cell activation in mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21-OCT-1999; 99US-0161653P

                                                                                                                                                                                                                                                                                                       The present invention relates to LP85, an analogue of platelet-derived growth factor (PDGF) homologue. Sequences of the invention are useful for the manufacture of a medicament for treating musculoskeletal disorder (MSD) which include promoting bone growth, cartilage differentiation and function, wound healing, neuron growth, preventing cartilage degradation or neuronal degeneration. They are useful for treating bone fractures, osteoporosis, osteopenia, arthritis, sarcopenia, periodontal disease, tissue atrophy, traumatised connective tissues, grafted connective tissues and/or transplanted organs, bone or muscle loss due to malignancy, endocrine disorders and immobility. They are also used for prophylactically increasing or maintaining bone density in a mammal. The present sequence is human LP85 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         19-MAY-2000;

Fernandes
          The present sequence is the protein sequence of human growth factor FCTR1, or platelet derived growth factor D (PDGPD), a secreted protein that shows homology to human vascular endothelial growth factor E and to human PDGFs A, B and C. FCTR1 RNA is present in pituitary gland tissues, uterine microvascular endothelial cells, crybroleukaemia cells, thyroid, small intestine, lymphocytes, adrenal gland and salivary gland. The invention provides FGFCX and FCTRX growth factors, polypeptides and
                                                                                                                           Treating, delaying the onset of, or ameliorating an inflammatory pathology (e.g. inflammatory bowel disease or Crohn's disease) by administering to the subject fibroblast growth factors or a combination of growth factors.

FGFCX and FCTRX polypeptides and deletion variants are also useful for treating growth and proliferative diseases such as cancer, angiogenesis, collagen formation, fibrotic and cardiovascular diseases or disbetic ulcers, and in wound healing. They can be used in screening and detection methods, chromosome mapping, tissue typing, predictive medicine, diagnostic assays, prognostic assays, and therefore the color of the c

                                                                                                                                       뫄
                                                                                                                                                                                                                                                                                      CC vascular endotholial growth factor-like protein) of 111-136 amino acid cresidues in length and comprises the sequence appearing as ABG9289 from CC comprising a first polypeptide disulphide bonded to a second polypeptide, where each of the first and second polypeptides is from zvegf 3 and CC where each of the first and second polypeptides is from zvegf 3, and CC where the protein modulates cell proliferation, differentiation, cmetabolism or migration, the zvegf 3 encoding polynucleotides and zvegf 3 cxpression vectors and host cells. Zvegf 3 is useful as additives in CC for designing molecules that antagonise semaphorin-stimulated activities, including neurite growth, cardiovascular development, cartilage and limb CC sites of abnormal cell proliferation and in gene therapy applications. CC repair, or cellular differentiation or proliferation, for stimulating the growth of fibroblast or smooth muscle cells, as molecular weight correpair, or cellular differentiation or proliferation, for stimulating the growth of solid tumours, for treating diabetic retinopathy, for clibrosis, including scar formation, keloids, liver fibrosis, lung fibrosis, esticuses, as passes of cell proliferation, keloids, liver fibrosis, lung fibrosis, esticuses (hepatitis), cirrhosis, streat disease (hepatitis), cirrhosis, streat disease, and reducing consulting scar formation, keloids, liver fibrosis, lung fibrosis, cardiac sclerosis, neurodegenerative diseases, and for the consulting scar formation, keloids, liver fibrosis, lung fibrosis, cardiac sclerosis, send female reproductive tract disease, and reducing consulting scar formation, keloids, liver fibrosis, lung fibrosis, cardiac sclerosis, send female reproductive tract disease, and for regenerating neurite outgrowths following strokes. The gene for human consulting scar formosome 4928.3. The present sequence represents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
        This sequences represents human zvegf4. zvegf4 can be used in a composition with either human or mouse zvegf3, for promoting growth of bone, ligament or cartilage and stimulating proliferation of osteoblasts or chondrocytes in a mammal. zvegf3 is a platelet derived growth factor (PDGF) homolog. The zvegf3 protein used was preferably a dimeric protein of residues 235-345 of human zvegf3 or all of the mouse zvegf3 protein, with a delivery vehicle. The method of thinvention is useful for promoting growth of bone, ligament or cartilage in a mammal, where the composition is administered at a site of a bony defect, purferably a fracture, bone graff site, implant site, or periodontal pocket, and for stimulating proliferation of osteoblasts or chondrocytes in a mammal. It
                                                                                                                                                                                                                                                                                                                                                                                                                           21-OCT-1999;

```
CC growth factor domain having a cystine knot structure, and a CUB domain. A CC propeptide-like sequence extends from residue 180 to either residue 245. CC 249 or 257. Zvegf4 (2an thus be prepared in a variety of multimeric forms CC including zvegf4 (1258-370). zvegf4 (252-370). zvegf4 (256-370). zvegf4 (250-370) and zvegf4 (258-370). Expression of zvegf4 polynucleotide in cultured CC mammalian cells results in production of a disulfide-bonded, dimeric CC processing to remove the CUB and interdomain regions. An active growth CC factor domain dimer can be produced directly by expressing a truncated CC polynucleotide. A claimed method of improving kidney function, or CC enhancing proliferation or survival of kidney tubule epithelial cells or CC enhancing proliferation or survival of kidney tubule epithelial cells or CC epithelial cell precursors in a mammal, comprises administering a composition containing a zvegf4 protein or zvegf4 protein-encoding composition containing a zvegf4 protein or zvegf4 protein is preferably a disulfide bonded dimer of 2 polypeptide chains comprising residues 258-370, 250-250, 253, 254, 255, 256, 257, 258, 259, 259, 260, 261, 262 or 263, and y CC 244, 25, 35, 52, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, CC 246, 250, 253, 254, 255, 256, 257, 258, 259, 260, 261, 260 or 263, and y CC 253, 264, 267, 269 or 370 or 263, and y CC 254, 253, 264, 255, 256, 257, 258, 259, 259, 260, 261, 262 or 263, and y CC 253, 264, 267, 268, 267, 268, 257, 258, 259, 260, 261, 262 or 263, and y CC 253, 264, 253, 264, 255, 256, 257, 258, 259, 259, 260, 261, 262 or 263, and y CC 253, 264, 267, 268, 267, 268, 267, 268, 269, 260, 261, 262 or 263, and y CC 253, 264, 267, 268, 267, 268, 269, 260, 261, 262 or 263, and y CC 253, 264, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267, 268, 267,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invantion relates to a new method of detecting the presence of 30664188 antigen in a sample. The invention is useful for detecting the presence of 30664188 in a biological sample (e.g. blood or its component originating from a mammal, preferably human), and for contributing to diagnosis of cancer in a subject. The present amino acid sequence represents a human FCTR protein, as described in the methods of the invention

CC or expression of the protein The sequences are useful for identifying a
CC binding partner to the protein comprising contacting the protein with a
CC binding partner and determining whether the binding partner effects an
CC or ameliorating a medical condition such as an autoimmune disease (e.g.
CC multiple sclerosis, myasthenia gravis), blood coagulation disorders (e.g.
CC fibrinogenaemia, haemophilia), blood platelet disorders (e.g.
CC thrombocytopenia), hyperproliferative disorders (e.g. sarcoidosis, Sezary
CC syndrome), neurodegenerative disorders (e.g. Alzheimer's disease,
CC parkinson's disease), renal disorders (e.g. Alzheimer's disease,
CC parkinson's consilitis, laryngitis), endocrine disorders (e.g.
CC disorders (e.g. tonsilitis, laryngitis), endocrine disorders (e.g.
CC acromegaly, thyrotoxicosis), reproductive disorders (gonorrhea,
CC stenosis), infectious diseases (e.g. polio, rubella) and cancer.
CC sequences ABG76569-ABG76616 represent human secreted proteins of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to albumin fusion proteins comprising a therapeutic protein x and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and disgnosing disorders such as cancer, reproductive disorders dispetive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetcs), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
The present invention describes a method for reducing proliferation of or cettracellular matrix production by a cell in a mammal. The method CC comprises administering to the mammal a composition comprising a CC therapeutically effective amount of a zvegf4 antagonist chosen from anti-cvegf4 antibodies, inhibitory polynucleotides, inhibitors of zvegf4 cotivation, and mitogenically inactive, receptor-binding variants of cvegf4. Zvegf4 (also called PDGF-D) is a multi-domain protein that is cructurally related to platelet derived growth factor (PDGF) and CC vascular endothelial growth factors (VEGF). Zvegf4 has cytostatic, CC emphrotropic, hepatotropic, antiinflammatory, osteopathic and CC antiarthritic activities. The method is useful for reducing proliferation of mesangial, epithelial, endothelial, smooth muscle, fibroblast, CC in a mammal, in particular proliferation of prostate tumour cells, and CC in a mammal, in particular proliferation of prostate tumour cells, and cfor reducing extracellular matrix production by a cell in a mammal cc suffering from a fibroproliferative disorder of kidney, bone or liver. In particular it is useful for reducing stellate cell activation. The method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                      Example 3; Page 19-20; 34pp; English.

Fibroproliferative disorders of the kidney include, glomerulonephritis, diabetic glomerulosclerosis, lupus nephritis, renal arteriosclerosis and nephrotic syndrome, disorders of the liver include chronic active hepatitis and many other types of cirrhosis, and disorders of the bone include osteopetrosis, hyperostosis, osteosclerosis, osteoarthritis, and ectopic bone formation in metastatic prostate cancer. The present sequence represents human zvegf4, which is used in an example

                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                     protein stimulates proliferation, differentiation, or migration of the mesenthymal cells and may modulate activities mediated by cell surface semaphorins. ZVEGF4 may be used to design ant/agonists of neuropilingemaphorin interactions which may be of use in neurite growth, cardiovascular development, cartilage and limb development, T- and B-cell functions as well as treating rheumatoid arthritis, various forms of cancer, autoimmune diseases, inflammation, retinopathies, haemangiomas, ischaemic events, neuropathies, acute nerve damage, central nervous system diseases and peripheral nervous system diseases including stroke. The isolated protein is also used for a pharmaceutical composition as therapeutic agents, diagnostic agents, and research tools and reagents. It can be used in the study and regulation of cell and tissue development, as components of cell culture media. The proteins can form homomultimers or heteromultimers that act on tissues to control organ development by modulating cell proliferation, migration, differentiation, or metabolism. The gene for human ZVEGF4 is located on chromosome 11q22.3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated growth factor analogue ZVEF4 proteins for pharmaceutical composition as, e.g. therapeutic agents, diagnostic agents, and research tools and reagents, includes polypeptides from amino acid residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated protein comprising a first polypeptide disulphide-bonded to a second polypeptide. The first and second polypeptides are from 113-138 amino acid residues and comprises 258-370 amino acid residues of human growth factor homologue ZVEGF4. The second polypeptides are from 113-138 amino acid residues of human growth factor homologue ZVEGF4. The second polypeptides are from 113-138 amino acid residues of human growth factor homologue ZVEGF4. The second polypeptides are from 113-138 amino acid residues of human growth factor homologue zvectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Col 71-72; 67pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC platelet-derived growth factor (PDGF) alpha receptor agonist and thus is useful as a PDGF alpha receptor agonist and thus is useful CC for treating full-thickness skin wounds, female reproductive tract and CC prolonged bleeding, periodontal disease, damaged liver tissue, and CC adhesives for promoting revascularisation of healing tissue. The polypeptide is also useful for treating liver damage due CC cliver disease, chronic active hepatitis, hepatic chronic passive CC congestion (CPC), central haemorrhagic necrosis, and many types of C cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. The polypeptide is useful for enhancing expansion and CC cirrhosis. It may be used for treating peripheral neuropathies by increasing spinal cord and sensor treating peripheral neuropathies by increasing spinal cord and sensor treating peripheral neuropathies by caused by spinal injuries. Application may also be made in treating cc assed by spinal injuries. Application may also be made in treating pralysis CC parkinson's disease, diabetic retinopathy, psoriasis, arthritis, cc scleroderms, and reducing fibrosis, kehoids, liver fibrosis, lung cffects of zvegf3, and for treating proliferative vascular disorders, coular neovascularisation, inflammatory disorders, rheumatoid arthritis, coular neovascularisation, inflammatory disorders, rheumatoid arthritis, coular necessity and contents of the processity of the contents of the contents of the contents of the contents of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relaces to the polynucleotide sequence enco homologue referred to as zvegf3 and the polynucleotide sequence encoit. The zvegf3 polypeptide is useful for stimulating the growth of fibroblasts or smooth muscle cells, or for activating a cell-surface fibroblasts or smooth muscle cells, or for activating a cell-surface fibroblasts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diseases of the

Use of platelet-derived growth factor, vascular endothelial growth factor, or their modulators for modulating neural stem cell or neural progenitor cell activity, particularly for treating e.g. Alzheimer's, ischemia or stroke.

Disclosure; Page 23; 119pp; English.

The sequences given in ABB80131-35 show proteins which may be used in the method of the invention for alleviating or reducing a symptom of a CC disease or disorder of the nervous system. The method comprises administering platelet-derived growth factor (PDGF), vascular endothelial growth factor (VEGF), a combination of PDGF and VEGF, or a PDGF or VEGF agonist, to a patient in order to endothate neural stem cell or neural corresponding the symptoms of a disease or disorder of the nervous system, and the symptoms of a disease or disorder of the nervous system, are reducing the symptoms of a disease or disorder of the nervous system, and the symptoms of a disease or disorder of the nervous system, are reducing the symptoms of a disease or disorder of the nervous system, are reducing the symptoms of a disease or disorder of the nervous system, are reducing the symptoms of a disease or disorder of the nervous system, are reducing the symptoms of a disease or disorders, neural stem cell disorders, neural properties of the nervous system, and the properties of the nervous system, and the memory of disorders. In particular, the method is useful for alleviating or treating parkinson's disease and disorders, Huntington's disease, and the stocker, spinal ischaemia, and other psychoses, depression, bipolar cold injury, schizonder, anxiety syndromes/disorders, phobias, stress and related syndromes, compulsive behaviour syndromes, seasonal mood disorder, borderline personality disorder, cerebral palsy, life style drug, multi-infarct dementia, Lewy body dementia, age related/geriatric conformation related brain/spinal cord injury, anti-cancer treatment related brain/spinal cord injury, infection and cord injury, anti-cancer treatment related brain/spinal cord injury, environmental toxin the manufacture of a medicament for alleviating or treating or treating or sleep disorders. The pDGF and/or vEGF, is useful in the manufacture of a medicament for alleviating or treating.

```
New protein consisting of two platelet-derived growth factor-D polypeptide chains, useful for stimulating the production of bone and/or connective tissue in both humans and animals, e.g. in treating fractures
```

English.

The invention relates to a protein consisting of two platelet-derived growth factor-D (PDGF-D) polypeptide chains. The protein is useful in enhanced production of PDGF-D growth factor domain dimers. It may be used to stimulate production of bone and/or connective tissue in both humans and animals, such as in cases of fractures, bone grafts, implants, repair of bony defects arising from surgery, surgical reconstruction following traumatic injury, repair of hereditary or other physical abnormalities, or in treatment of osteoporosis. The present sequence represents a human

                                                                                                                                                                                                                                                                                                                                                   The invention relates to a fusion protein comprising, from amino to carboxyl terminus, a first platelet-derived growth factor-D (PDGF-D) domain polypeptide, a linker polypeptide, and a second PDGF-D domain polypeptide. The fusion proteins are useful for stimulating the production of bone and/or connective tissue in both human and non-human animals. The fusion proteins are specifically useful in non-union fractures and fractures in patients with compromised healing, bone grafts, bone healing following radiation-induced osteonecrosis, implants, or treatment of periodontal disease, joint injuries, osteoporosis or other conditions characterised by increased bone loss or decreased bone formation. The invention is useful in protein therapy. The present requence is human platelet derived growth factor (PDGF-D). PDGF-D is
                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New fusion protein comprising a first platelet-derived growth factor-D (PDGF-D) domain, a linker, and a second PDGF-D domain polypeptides, useful for stimulating the production of bone and/or connective tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fox

                                           The present invention relates to a method for promoting growth of bones ligaments and cartilages in a mammal. The invention is useful for treating osteoporosis such as age related osteoporosis, host-menopausal osteoporosis, glucocorticoid induced osteoporosis and disuse osteoporosis. The invention is also useful in treating bony defects due to injury, surgery, tumour removal, ulceration, infection or other congenital defects. The present sequence is human zvegf4 protein

Sequence 5, Application US/09823033

; Sequence 5, Application US/09823033

; Patent No. 6663870

; GENERAL INFORMATION:

; APPLICANT: Hart, Charles E.

APPLICANT: Gilbertson, Debra G.

TITLE OF INVENTION: METHODS FOR PROMOTING GROWTH OF

TITLE OF INVENTION: LIGAMENT AND CARTILAGE

; FILE REFERENCE: 00-12

; CURRENT APPLICATION NUMBER: US/09/823,033

; CURRENT FILING DATE: 2001-03-29

; NUMBER OF SEQ ID NOS: 5

SOFTWARE: FastSEQ for Windows Version 3.0

; SEQ ID NO 5

; SEQ ID NO 5

; LENGTH: 370

TYPE: PRT

; ORGANISM: Homo sapiens
Sequence 8, Application US/09438046
PATENT NO. 6706687
GENERAL INFORMATION:
APPLICANT: ERIKSSON, Ulf
APPLICANT: LEE, Xuri
APPLICANT: LEE, Xuri
APPLICANT: UTFELA, Marko
APPLICANT: UTFELA, Marko
APPLICANT: OESTMAN, Arne
APPLICANT: OESTMAN, Arne
APPLICANT: HELDIN, Carl-Henrik
